

# Arxiv Topic Classification and Paper Recommendation System

Nirajan Bekoju  
Nirajan Thakuri  
Rijan Pokhrel  
Abhishek Timilsina

# Topics of discussion

- Problem Statement
- Data & Data Statistics
- Model Development and Evaluation

# Introduction

- Multi Label Classification of Arxiv Research Paper.
- Development of recommendation system for the paper

# Problem Statement

- Difficult to get the recommendation of similar paper especially for beginners

# About Dataset

- Data Source:  
<https://www.kaggle.com/datasets/Cornell-University/arxiv>
- The dataset contains following columns :  
id, submitter, authors , title , comments , journal-ref,  
doi , abstract ,categories , versions

```
<class 'pandas.core.frame.DataFrame'>
RangeIndex: 2280354 entries, 0 to 2280353
Data columns (total 6 columns):
#   Column      Dtype
---  -
0   Unnamed: 0   int64
1   title        object
2   authors     object
3   date        object
4   abstract    object
5   categories  object
dtypes: int64(1), object(5)
memory usage: 104.4+ MB
```

## Data Statistics

- There are 176 unique labels for the paper in this dataset.

Maximum Published	No. of paper	Minimum Published	No. of paper
astro-ph	104928	bayes-an	16
quant-ph	136005	ao-sci	17
cs.LG	143500	plasm-ph	38
hep-th	158697	acc-phys	48
hep-ph	171480	atom-ph	123

Table 1.1: Maximum and minimum published label with no. of papers

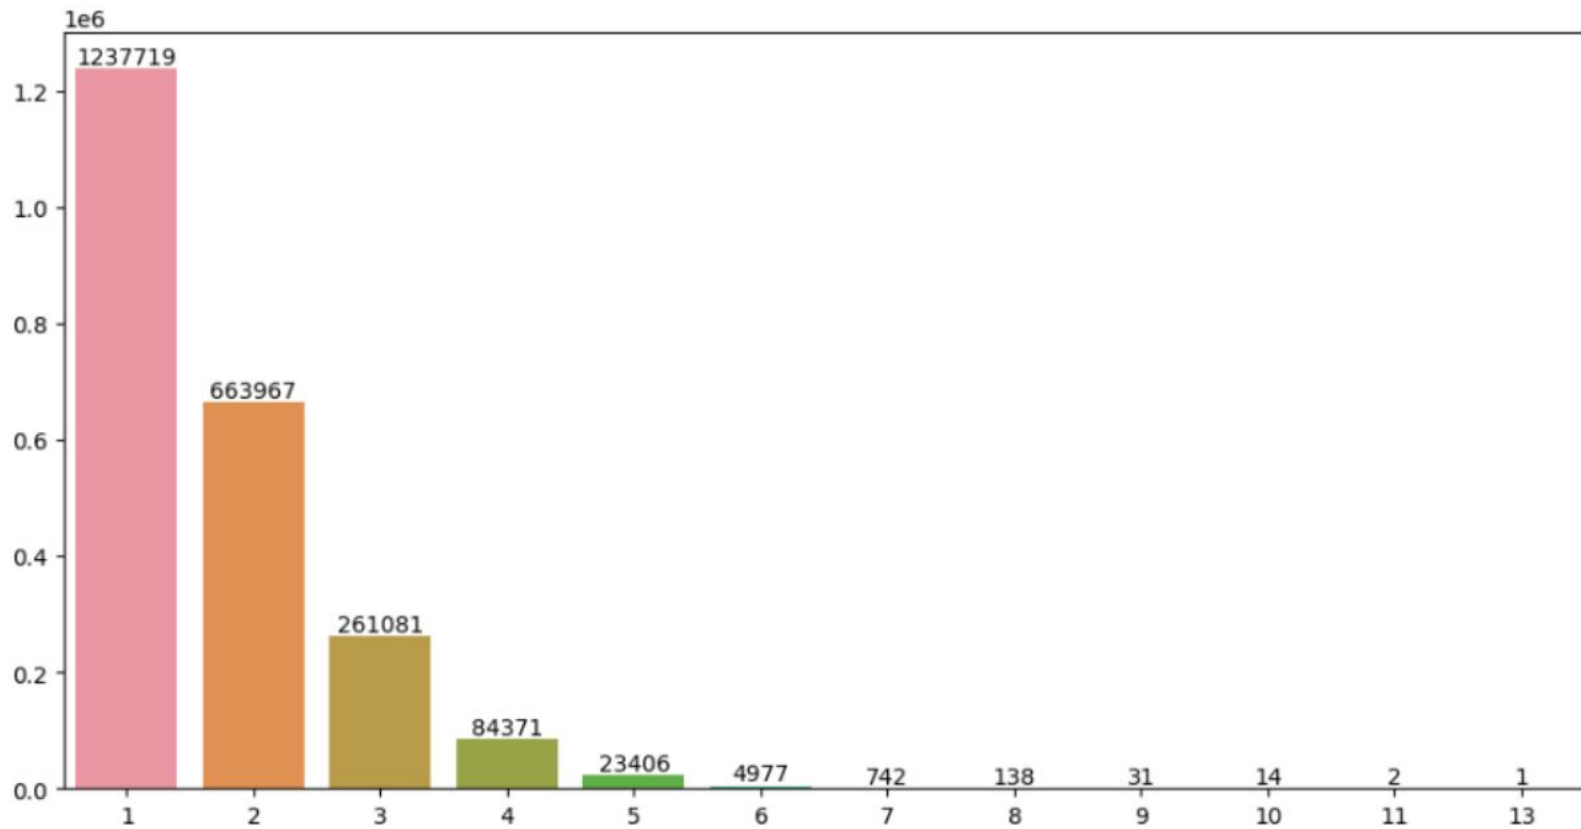

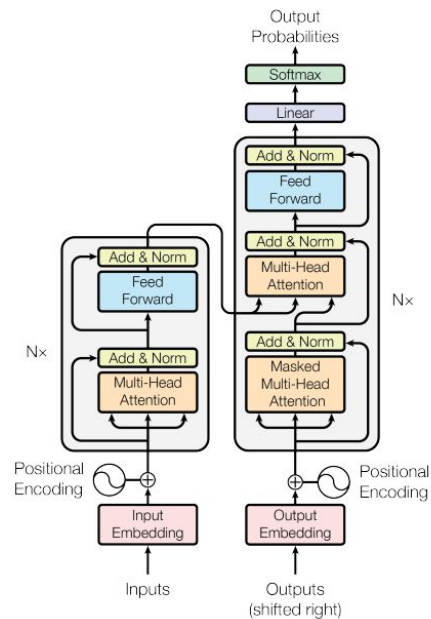

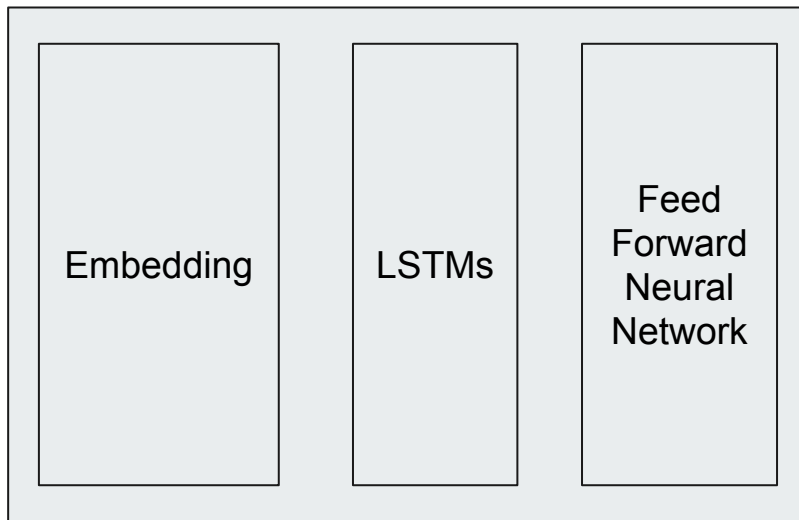

Figure 1.1: Categories Count Plot

# Deep Learning Models

## Evaluation Metrics

- Hamming Loss, Accuracy, F1-score for multilabel classification
- Precision at K, Recall at K generally used for recommender system
- **Problem: We don't have dataset with paper and corresponding relevant paper.**
- Hence, manual evaluation and user feedback for now.

**Thank You**
